Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments:

Clarification of 112, 1st para - enablement and written description was sought with respect to non-enablement by any mutein having the functional activity of protection, rejuvenation and viability of cell. Suggestions to amend the breadth of the claims by providing SEQ ID NOs: that would identify specific sequence regions of EPO that need to be conserved for EPO activity, such that mutations in those sequence regions would destroy the EPO activity, but have tissue protective and restorative effects. This would allow the claims to be more specific and may overcome non-enablement and written description rejections.

Clarification with regards to 102 art rejections were sought. Above suggestions providing specific sequence IDs in the amended claims, would help in limiting the claims and may overcome art rejections.
